

Tomasz Stanisław

Software Engineer & Tech Lead

I turn ideas into solutions — shaping the *concept, design and architecture* — then ship across the full stack and *grow the people* who build it with me.

members in ATOM, the dev
community I lead

01 Experience

Tech Lead · TheEventa

Concurrent role September 2025 – Present

Event-booking platform · MVP v1 under development

- Turn product ideas into solution designs and architecture, then lead development across the Next.js frontend, NestJS backend, internal admin panel and Playwright E2E project.
- Lead workflows for authentication/SSO, organizations, event objects and spaces, assets, wizard forms, pricing recalculated from selected options, and calendar and reservations.
- Own the frontend design system and Storybook, alongside the landing page and blog.
- Run an AI-assisted delivery process (Cursor, Codex, Claude) in a deliberately small team with the CEO and a DevOps collaborator; I review the code, test every feature and push the final changes myself.

Case study: an MVP rebuilt with a small team and AI agents · devthomas.pl/work/theeventa-mvp

Software Engineering & Technical Leadership · Orange Polska

October 2022 – Present

Formal title: Inżynier DevOps

- **Architecture:** design and develop the React and TypeScript frontend of an internal CMS, with navigation, actions, forms and data grids driven by backend configuration and JSON schemas, bringing together resources from multiple connected legacy services. Dozens of new resources have since reached production without frontend changes.
- **Forms:** schema-defined forms with RJSF custom fields and widgets, using Material UI and MUI X Data Grid Pro.
- **Delivery:** a new CMS version released every two-week sprint.
- **Leadership:** technical guidance and code review for the CMS team, plus code review across the department's React projects.
- **Quality:** introduced Cypress E2E testing from scratch, with Page Object Model, DRY shared test logic and parallel execution, and trained two testers, reviewing their code in the first year. Regression checks fell from 1–3 days of manual testing to about an hour on Orange TV GO (100+ scenarios) and about 30 minutes on the CMS.
- **Product:** built an Orange TV GO feedback form and backend submission flow that makes user opinions and ratings available to the Product Owner.

03 Credentials

Associate Cloud Engineer — Google

Issued July 2024 · Expires July 2027

English — approximately C1

Used professionally in international environments

Master's, Finance and Accounting

University of Lodz · 2012-2014

Bachelor's, Finance and Accounting

University of Lodz · 2009-2012

SELECTED TRAINING

Architektura na Froncie

Advanced frontend architecture programme · Tomasz Ducin

Droga Nowoczesnego Architekta

Software architecture: DDD, event sourcing, microservices, legacy systems

COMMUNITY LEADERSHIP

I lead ATOM (Akademia Tworzenia Oprogramowania), a programming community with 900 members.
